Glyphicons

Available glyphs

Includes 200 glyphs in font format from the Glyphicon Halflings set. Glyphicons Halflings are normally not available for free, but their creator has made them available for Bootstrap free of cost. As a thank you, we only ask that you to include a link back to Glyphicons whenever possible.

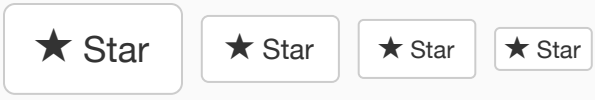
How to use

For performance reasons, all icons require a base class and individual icon class. To use, place the following code just about anywhere. Be sure to leave a space between the icon and text for proper padding.

Examples

Use them in buttons, button groups for a toolbar, navigation, or prepended form inputs.

EXAMPLE



Dropdowns

Toggleable, contextual menu for displaying lists of links. Made interactive with the dropdown JavaScript plugin.

Example

Wrap the dropdown's trigger and the dropdown menu within `.dropdown`, or another element that declares `position: relative;`. Then add the menu's HTML.

EXAMPLE

Alignment options

Add `.pull-right` to a `.dropdown-menu` to right align the dropdown menu.

Headers

Add a header to label sections of actions in any dropdown menu.

EXAMPLE

Dropdown header
Action
Another action
Something else here

Dropdown header
Separated link

Disabled menu items

Add `.disabled` to a `<li>` in the dropdown to disable the link.

EXAMPLE

Regular link
Disabled link
Another link

Button groups

Group a series of buttons together on a single line with the button group. Add on optional JavaScript radio and checkbox style behavior with our buttons plugin.

> **Tooltips & popovers in button groups require special setting**
>
> When using tooltips or popovers on elements within a `.btn-group`, you'll have to specify the option `container: 'body'` to avoid unwanted side effects (such as the element growing wider and/or losing its rounded corners when the tooltip or popover is triggered).

Basic example

Wrap a series of buttons with `.btn` in `.btn-group`.

EXAMPLE

Left Middle Right

Button toolbar

Combine sets of `<div class="btn-group">` into a `<div class="btn-toolbar">` for more complex components.

EXAMPLE

1 2 3 4 5 6 8
7

Sizing

Instead of applying button sizing classes to every button in a group, just add `.btn-group-*` to the `.btn-group`.

EXAMPLE

Left Middle
Right

Left Middle Right

Left Middle Right

Left Middle Right

Nesting

Place a `.btn-group` within another `.btn-group` when you want dropdown menus mixed with a series of buttons.

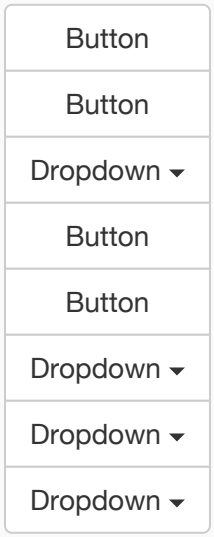
EXAMPLE

1 2
Dropdown

Vertical variation

Make a set of buttons appear vertically stacked rather than horizontally.

EXAMPLE



Justified link variation

Make a group of buttons stretch at the same size to span the entire width of its parent.

> **Element-specific usage**
>
> This only works with `<a>` elements as the `<button>` doesn't pick up these styles.

EXAMPLE

Button dropdowns

Use any button to trigger a dropdown menu by placing it within a `.btn-group` and providing the proper menu markup.

> **Plugin dependency**
>
> Button dropdowns require the dropdown plugin to be included in your version of Bootstrap.

Single button dropdowns

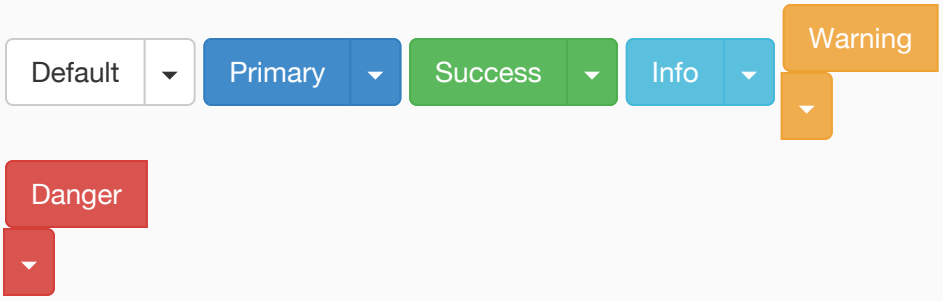
Turn a button into a dropdown toggle with some basic markup changes.

EXAMPLE

Split button dropdowns

Similarly, create split button dropdowns with the same markup changes, only with a separate button.

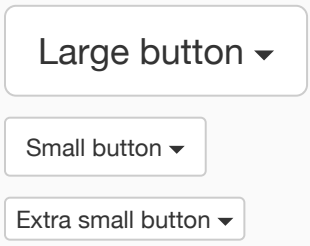
EXAMPLE



Sizing

Button dropdowns work with buttons of all sizes.

EXAMPLE



Dropup variation

Trigger dropdown menus above elements by adding `.dropup` to the parent.

EXAMPLE

Input groups

Extend form controls by adding text or buttons before, after, or on both sides of any text-based input. Use `.input-group` with an `.input-group-addon` to prepend or append elements to a `.form-control`.

Cross-browser compatibility

Avoid using `<select>` elements here as they cannot be fully styled in WebKit browsers.

Tooltips & popovers in input groups require special setting

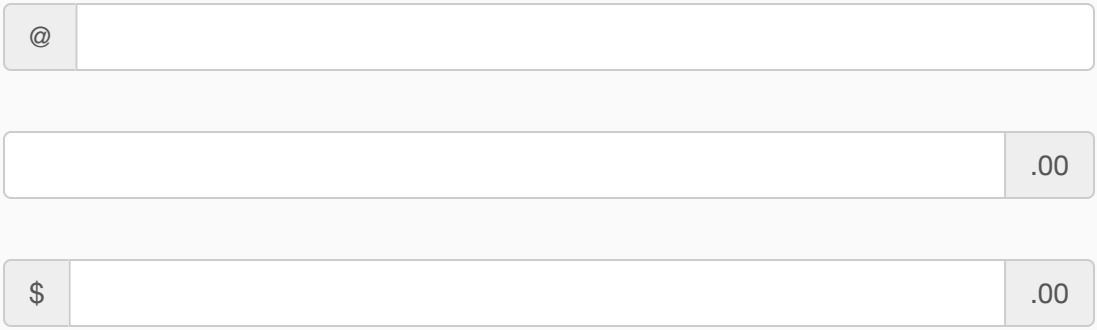
When using tooltips or popovers on elements within an `.input-group`, you'll have to specify the option `container: 'body'` to avoid unwanted side effects (such as the element growing wider and/or losing its rounded corners when the tooltip or popover is triggered).

Don't mix with form groups

Do not apply input group classes directly to form groups. An input group is an isolated component.

Basic example

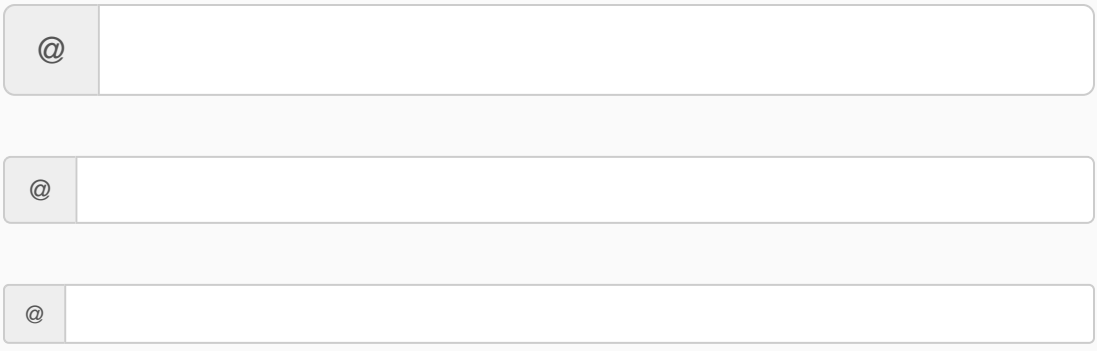
EXAMPLE



Sizing

Add the relative form sizing classes to the `.input-group` itself and contents within will automatically resize—no need for repeating the form control size classes on each element.

EXAMPLE



Checkboxes and radio addons

Place any checkbox or radio option within an input group's addon instead of text.

EXAMPLE

Button addons

Buttons in input groups are a bit different and require one extra level of nesting. Instead of `.input-group-addon`, you'll need to use `.input-group-btn` to wrap the buttons. This is required due to default browser styles that cannot be overridden.

EXAMPLE

Buttons with dropdowns

EXAMPLE

Segmented buttons

EXAMPLE

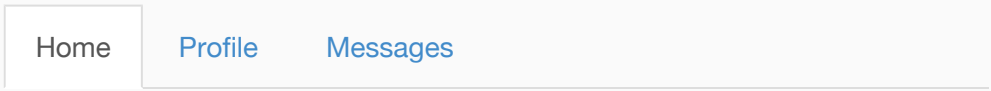
Navs

Navs available in Bootstrap have shared markup, starting with the base `.nav` class, as well as shared states. Swap modifier classes to switch between each style.

Tabs

Note the `.nav-tabs` class requires the `.nav` base class.

EXAMPLE



Requires JavaScript tabs plugin

For tabs with tabbable areas, you must use the tabs JavaScript plugin.

Pills

Take that same HTML, but use `.nav-pills` instead:

EXAMPLE

Home Profile Messages

Pills are also vertically stackable. Just add `.nav-stacked`.

EXAMPLE

Home

Profile

Messages

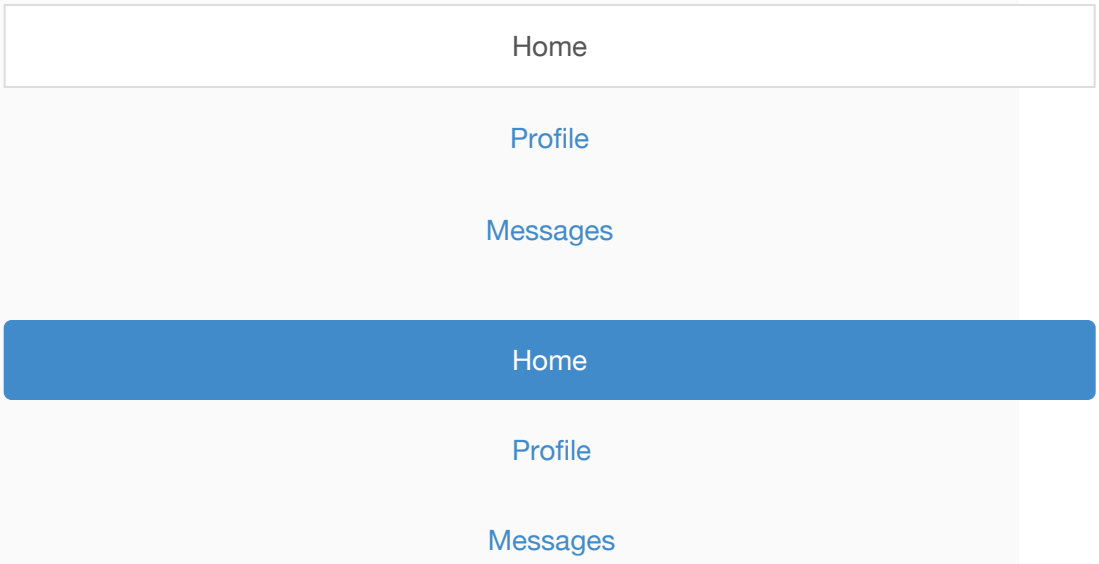
Justified

Easily make tabs or pills equal widths of their parent at screens wider than 768px with `.nav-justified`. On smaller screens, the nav links are stacked.

WebKit and responsive justified navs

Chrome and Safari both exhibit a bug in which resizing your browser horizontally causes rendering errors in the justified nav that are cleared upon refreshing. This bug is also shown in the justified nav example.

EXAMPLE



Disabled links

For any nav component (tabs, pills, or list), add `.disabled` for **gray links and no hover effects**.

> **Link functionality not impacted**
>
> This class will only change the `<a>`'s appearance, not its functionality. Use custom JavaScript to disable links here.

EXAMPLE

Using dropdowns

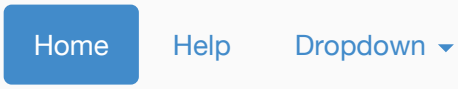
Add dropdown menus with a little extra HTML and the dropdowns JavaScript plugin.

Tabs with dropdowns

EXAMPLE

Pills with dropdowns

EXAMPLE



Navbar

Default navbar

Navbars are responsive meta components that serve as navigation headers for your application or site. They begin collapsed (and are toggleable) in mobile views and become horizontal as the available viewport width increases.

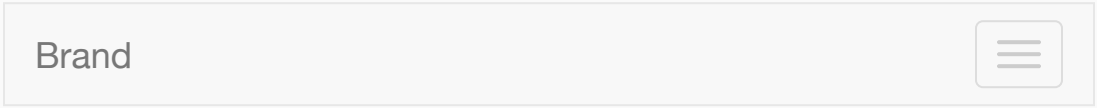
Customize the collapsing point

Depending on the content in your navbar, you might need to change the point at which your navbar switches between collapsed and horizontal mode. Customize the `@grid-float-breakpoint` variable or add your own media query.

Requires JavaScript

If JavaScript is disabled and the viewport is narrow enough that the navbar collapses, it will be impossible to expand the navbar and view the content within the `.navbar-collapse`.

EXAMPLE



Plugin dependency

The responsive navbar requires the collapse plugin to be included in your version of Bootstrap.

Make navbars accessible

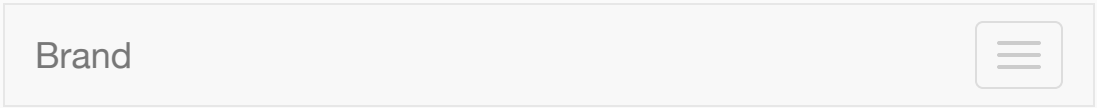
Be sure to add a `role="navigation"` to every navbar to help with accessibility.

Forms

Place form content within `.navbar-form` for proper vertical alignment and collapsed behavior in narrow viewports. Use the alignment options to decide where it resides within the navbar content.

As a heads up, `.navbar-form` shares much of its code with `.form-inline` via mixin.

EXAMPLE



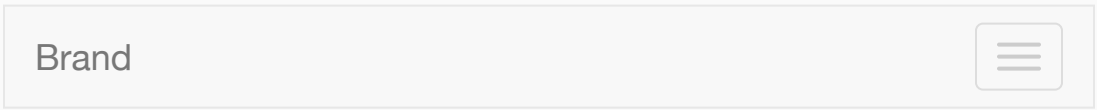
Always add labels

Screen readers will have trouble with your forms if you don't include a label for every input. For these inline navbar forms, you can hide the labels using the `.sr-only` class.

Buttons

Add the `.navbar-btn` class to `<button>` elements not residing in a `<form>` to vertically center them in the navbar.

EXAMPLE



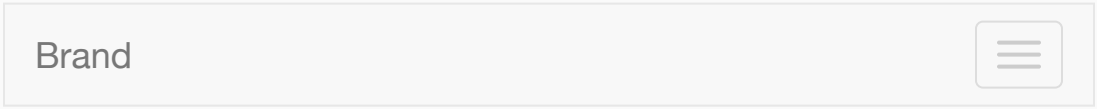
Context-specific usage

Like the standard button classes, `.navbar-btn` can be used on `<a>` and `<input>` elements. However, neither `.navbar-btn` nor the standard button classes should be used on `<a>` elements within `.navbar-nav`.

Text

Wrap strings of text in an element with `.navbar-text`, usually on a `<p>` tag for proper leading and color.

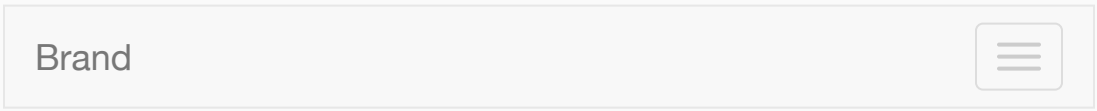
EXAMPLE



Non-nav links

For folks using standard links that are not within the regular navbar navigation component, use the `.navbar-link` class to add the proper colors for the default and inverse navbar options.

EXAMPLE



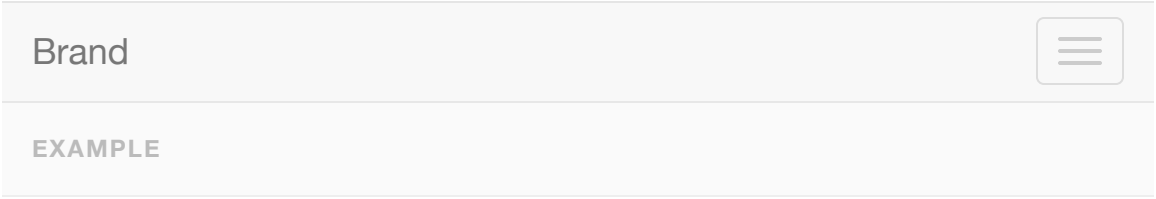
Component alignment

Align nav links, forms, buttons, or text, using the `.navbar-left` or `.navbar-right` utility classes. Both classes will add a CSS float in the specified direction. For example, to align nav links, put them in a separate `<ul>` with the respective utility class applied.

These classes are mixin-ed versions of `.pull-left` and `.pull-right`, but they're scoped to media queries for easier handling of navbar components across device sizes.

Fixed to top

Add `.navbar-fixed-top`.



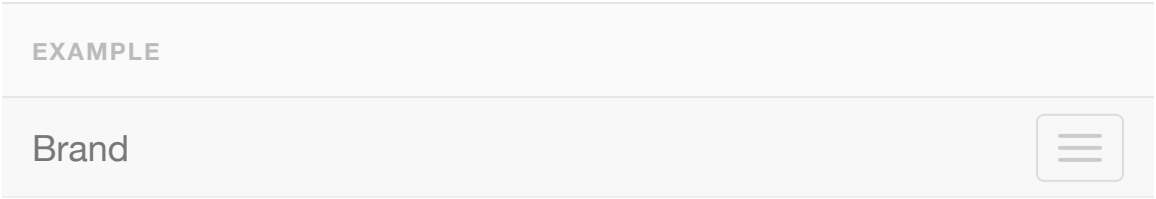
Body padding required

The fixed navbar will overlay your other content, unless you add `padding` to the top of the `<body>`. Try out your own values or use our snippet below. Tip: By default, the navbar is 50px high.

Make sure to include this **after** the core Bootstrap CSS.

Fixed to bottom

Add `.navbar-fixed-bottom` instead.



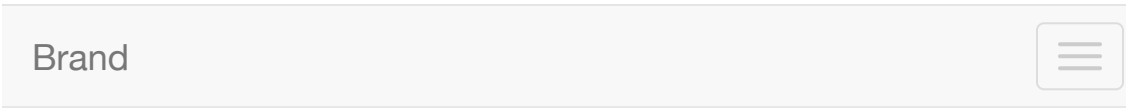
Body padding required

The fixed navbar will overlay your other content, unless you add `padding` to the bottom of the `<body>`. Try out your own values or use our snippet below. Tip: By default, the navbar is 50px high.

> Make sure to include this **after** the core Bootstrap CSS.

Static top

Create a full-width navbar that scrolls away with the page by adding `.navbar-static-top`. Unlike the `.navbar-fixed-*` classes, you do not need to change any padding on the `body`.



EXAMPLE

Inverted navbar

Modify the look of the navbar by adding `.navbar-inverse`.

EXAMPLE

Breadcrumbs

Indicate the current page's location within a navigational hierarchy.

Separators are automatically added in CSS through `:before` and `content`.

EXAMPLE

Home

Home / Library

Home / Library / Data

Pagination

Provide pagination links for your site or app with the multi-page pagination component, or the simpler pager alternative.

Default pagination

Simple pagination inspired by Rdio, great for apps and search results. The large block is hard to miss, easily scalable, and provides large click areas.

EXAMPLE

« 1 2 3 4 5 »

Disabled and active states

Links are customizable for different circumstances. Use `.disabled` for unclickable links and `.active` to indicate the current page.

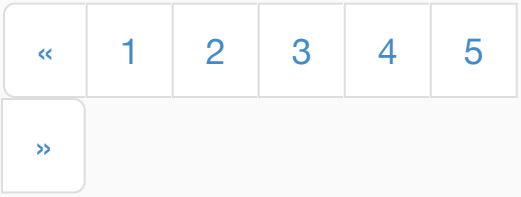
EXAMPLE

You can optionally swap out active or disabled anchors for `<span>` to remove click functionality while retaining intended styles.

Sizing

Fancy larger or smaller pagination? Add `.pagination-lg` or `.pagination-sm` for additional sizes.

EXAMPLE



Pager

Quick previous and next links for simple pagination implementations with light markup and styles. It's great for simple sites like blogs or magazines.

Default example

By default, the pager centers links.

EXAMPLE

Previous Next

Aligned links

Alternatively, you can align each link to the sides:

EXAMPLE

← Older Newer →

Optional disabled state

Pager links also use the general `.disabled` utility class from the pagination.

EXAMPLE

← Older Newer →

Labels

Example

EXAMPLE

Example heading New

Example heading New

Example heading New

Example heading New

Example heading New

Example heading New

Available variations

Add any of the below mentioned modifier classes to change the appearance of a label.

EXAMPLE

Default Primary Success Info Warning Danger

Badges

Easily highlight new or unread items by adding a `<span class="badge">` to links, Bootstrap navs, and more.

EXAMPLE

Inbox 42

Self collapsing

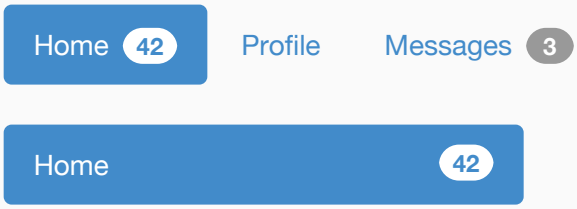
When there are no new or unread items, badges will simply collapse (via CSS's `:empty` selector) provided no content exists within.

Cross-browser compatibility

Badges won't self collapse in Internet Explorer 8 because it lacks support for the `:empty` selector.

Adapts to active nav states

Built-in styles are included for placing badges in active states in pill and list navigations.



EXAMPLE

Profile

Messages 3

Jumbotron

A lightweight, flexible component that can optionally extend the entire viewport to showcase key content on your site.

EXAMPLE

Hello, world!

This is a simple hero unit, a simple jumbotron-style component for calling extra attention to featured content or information.

Learn more

To make the jumbotron full width, and without rounded corners, place it outside all `.container`s and instead add a `.container` within.

Page header

A simple shell for an `h1` to appropriately space out and segment sections of content on a page. It can utilize the `h1`'s default `small` element, as well as most other components (with additional styles).

EXAMPLE

Example page header Subtext for header

Thumbnails

Extend Bootstrap's grid system with the thumbnail component to easily display grids of images, videos, text, and more.

Default example

By default, Bootstrap's thumbnails are designed to showcase linked images with minimal required markup.

EXAMPLE

Generic placeholder thumbnail

Generic placeholder thumbnail

Generic placeholder thumbnail

Generic placeholder thumbnail

Custom content

With a bit of extra markup, it's possible to add any kind of HTML content like headings, paragraphs, or buttons into thumbnails.

EXAMPLE

Generic placeholder thumbnail

Thumbnail label

Cras justo odio, dapibus ac facilisis in, egestas eget quam. Donec id elit non mi porta gravida at eget metus. Nullam id dolor id nibh ultricies vehicula ut id elit.

Button Button

Generic placeholder thumbnail

Thumbnail label

Cras justo odio, dapibus ac facilisis in, egestas eget quam. Donec id elit non mi porta gravida at eget metus. Nullam id dolor id nibh ultricies vehicula ut id elit.

Button Button

Generic placeholder thumbnail

Thumbnail label

Cras justo odio, dapibus ac facilisis in, egestas eget quam. Donec id elit non mi porta gravida at eget metus. Nullam id dolor id nibh ultricies vehicula ut id elit.

Button Button

Alerts

Provide contextual feedback messages for typical user actions with the handful of available and flexible alert messages. For inline dismissal, use the alerts jQuery plugin.

Examples

Wrap any text and an optional dismiss button in `.alert` and one of the four contextual classes (e.g., `.alert-success`) for basic alert messages.

> ### No default class
> Alerts don't have default classes, only base and modifier classes. A default gray alert doesn't make too much sense, so you're required to specify a type via contextual class. Choose from success, info, warning, or danger.

Well done! You successfully read this important alert message.

Heads up! This alert needs your attention, but it's not super important.

Warning! Best check yo self, you're not looking too good.

EXAMPLE

Oh snap! Change a few things up and try submitting again.

Dismissable alerts

Build on any alert by adding an optional `.alert-dismissable` and close button.

EXAMPLE

Warning! Best check yo self, you're not looking too good. ×

Ensure proper behavior across all devices

Be sure to use the `<button>` element with the `data-dismiss="alert"` data attribute.

Links in alerts

Use the `.alert-link` utility class to quickly provide matching colored links within any alert.

Well done! You successfully read **this important alert message**.

Heads up! This **alert needs your attention**, but it's not super important.

EXAMPLE

Warning! Best check yo self, you're **not looking too good**.

Oh snap! Change a few things up and try submitting again.

Progress bars

Provide up-to-date feedback on the progress of a workflow or action with simple yet flexible progress bars.

Cross-browser compatibility

Progress bars use CSS3 transitions and animations to achieve some of their effects. These features are not supported in Internet Explorer 9 and below or older versions of Firefox. Opera 12 does not support animations.

Basic example

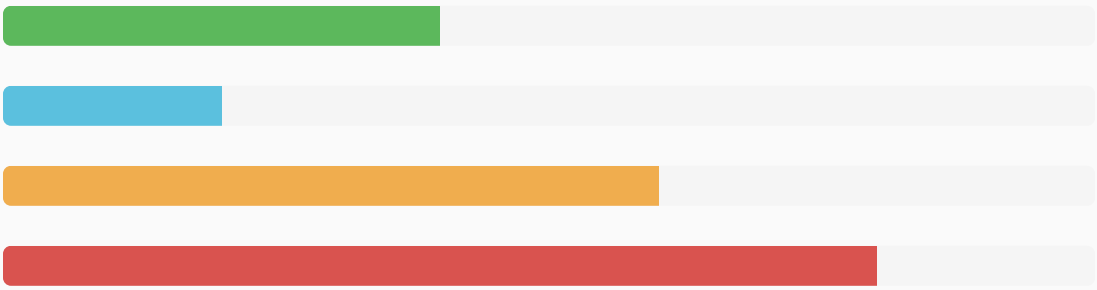
Default progress bar.

EXAMPLE

Contextual alternatives

Progress bars use some of the same button and alert classes for consistent styles.

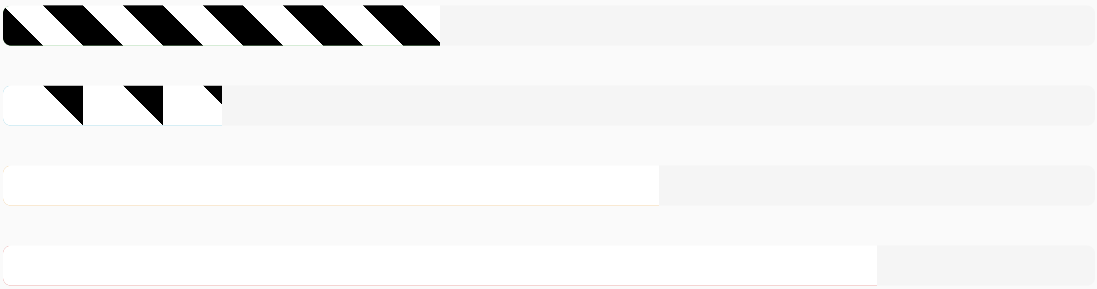
EXAMPLE



Striped

Uses a gradient to create a striped effect. Not available in IE8.

EXAMPLE



Animated

Add `.active` to `.progress-striped` to animate the stripes right to left. Not available in all versions of IE.

EXAMPLE

Stacked

Place multiple bars into the same `.progress` to stack them.

EXAMPLE

Media object

Abstract object styles for building various types of components (like blog comments, Tweets, etc) that feature a left- or right-aligned image alongside textual content.

Default media

The default media allow to float a media object (images, video, audio) to the left or right of a content block.

Generic placeholder image **Media heading**

Cras sit amet nibh libero, in gravida nulla. Nulla vel metus scelerisque ante sollicitudin commodo. Cras purus odio, vestibulum in vulputate at, tempus viverra turpis. Fusce condimentum nunc ac nisi vulputate fringilla. Donec lacinia congue felis in faucibus.

Generic placeholder image

EXAMPLE

Media heading

Cras sit amet nibh libero, in gravida nulla. Nulla vel metus scelerisque ante sollicitudin commodo. Cras purus odio, vestibulum in vulputate at, tempus viverra turpis. Fusce condimentum nunc ac nisi vulputate fringilla. Donec lacinia congue felis in faucibus.

Generic placeholder image **Media heading**

Cras sit amet nibh libero, in gravida nulla. Nulla vel metus scelerisque ante sollicitudin commodo. Cras purus odio, vestibulum in vulputate at, tempus viverra turpis. Fusce condimentum nunc ac nisi vulputate fringilla. Donec lacinia congue felis in faucibus.

Media list

With a bit of extra markup, you can use media inside list (useful for comment threads or articles lists).

Generic placeholder image **Media heading**

Cras sit amet nibh libero, in gravida nulla. Nulla vel metus scelerisque ante sollicitudin commodo. Cras purus odio, vestibulum in vulputate at, tempus viverra turpis.

Generic placeholder image **Nested media heading**

Cras sit amet nibh libero, in gravida nulla. Nulla vel metus scelerisque ante sollicitudin commodo. Cras purus odio, vestibulum in vulputate at, tempus viverra turpis.

Generic placeholder image **Nested media heading**

Cras sit amet nibh libero, in gravida nulla. Nulla vel metus scelerisque ante sollicitudin commodo. Cras purus odio, vestibulum in vulputate at, tempus viverra turpis.

Generic placeholder image

EXAMPLE

Nested media heading

Cras sit amet nibh libero, in gravida nulla. Nulla vel metus scelerisque ante sollicitudin commodo. Cras purus odio, vestibulum in vulputate at, tempus viverra turpis.

Media heading

Generic placeholder image

Cras sit amet nibh libero, in gravida nulla. Nulla vel metus scelerisque ante sollicitudin commodo. Cras purus odio, vestibulum in vulputate at, tempus viverra turpis.

List group

List groups are a flexible and powerful component for displaying not only simple lists of elements, but complex ones with custom content.

Basic example

The most basic list group is simply an unordered list with list items, and the proper classes. Build upon it with the options that follow, or your own CSS as needed.

- Cras justo odio
- Dapibus ac facilisis in

EXAMPLE

- Morbi leo risus
- Porta ac consectetur ac
- Vestibulum at eros

Badges

Add the badges component to any list group item and it will automatically be positioned on the right.

EXAMPLE

- Cras justo odio 14
- Dapibus ac facilisis in 2
- Morbi leo risus 1

Linked items

Linkify list group items by using anchor tags instead of list items (that also means a parent `<div>` instead of an `<ul>`). No need for individual parents around each element.

- Cras justo odio
- Dapibus ac facilisis in

EXAMPLE

- Morbi leo risus
- Porta ac consectetur ac
- Vestibulum at eros

Custom content

Add nearly any HTML within, even for linked list groups like the one below.

EXAMPLE

List group item heading
Donec id elit non mi porta gravida at eget metus.
Maecenas sed diam eget risus varius blandit.

List group item heading
Donec id elit non mi porta gravida at eget metus.
Maecenas sed diam eget risus varius blandit.

List group item heading
Donec id elit non mi porta gravida at eget metus.
Maecenas sed diam eget risus varius blandit.

Panels

While not always necessary, sometimes you need to put your DOM in a box. For those situations, try the panel component.

Basic example

By default, all the `.panel` does is apply some basic border and padding to contain some content.

EXAMPLE

Basic panel example

Panel with heading

Easily add a heading container to your panel with `.panel-heading`. You may also include any `<h1>`-`<h6>` with a `.panel-title` class to add a pre-styled heading.

Panel heading without title

Panel content

Panel title

EXAMPLE

Panel content

Panel with footer

Wrap buttons or secondary text in `.panel-footer`. Note that panel footers **do not** inherit colors and borders when using contextual variations as they are not meant to be in the foreground.

EXAMPLE

Panel content

Panel footer

Contextual alternatives

Like other components, easily make a panel more meaningful to a particular context by adding any of the contextual state classes.

Panel title

Panel content

Panel title

EXAMPLE

Panel content

Panel title

Panel content

Panel title

Panel content

Panel title

Panel content

With tables

Add any non-bordered `.table` within a panel for a seamless design. If there is a `.panel-body`, we add an extra border to the top of the table for separation.

Panel heading

Some default panel content here. Nulla vitae elit libero, a pharetra augue. Aenean lacinia bibendum nulla sed consectetur. Aenean eu leo quam. Pellentesque ornare

EXAMPLE

sem lacinia quam venenatis vestibulum. Nullam id dolor id nibh ultricies vehicula ut id elit.

#	First Name	Last Name	Username
1	Mark	Otto	@mdo
2	Jacob	Thornton	@fat
3	Larry	the Bird	@twitter

If there is no panel body, the component moves from panel header to table without interruption.

EXAMPLE

Panel heading

#	First Name	Last Name	Username
1	Mark	Otto	@mdo
2	Jacob	Thornton	@fat
3	Larry	the Bird	@twitter

With list groups

Easily include full-width list groups within any panel.

EXAMPLE

Panel heading

Some default panel content here. Nulla vitae elit libero, a pharetra augue. Aenean lacinia bibendum nulla sed consectetur. Aenean eu leo quam. Pellentesque ornare sem lacinia quam venenatis vestibulum. Nullam id dolor id nibh ultricies vehicula ut id elit.

- Cras justo odio
- Dapibus ac facilisis in
- Morbi leo risus
- Porta ac consectetur ac
- Vestibulum at eros

Wells

Default well

Use the well as a simple effect on an element to give it an inset effect.

EXAMPLE

Look, I'm in a well!

Follow @twbootstrap Tweet

Optional classes

Designed and built with all the love in the world by @mdo and @fat.

Control padding and rounded corners with two optional modifier classes.

EXAMPLE

Look, I'm in a large well!

EXAMPLE

Look, I'm in a small well!
